Abstract

- 1 Introduction
- 2 Combinatorial Optimization Problems and Constructive Heuristics
- 3 The ACO Algorithmic Framework
 - 3.1 Choice of pheromone trails and heuristic information
 - 3.2 Solution construction
 - 3.3 Global pheromone update
 - 3.4 Pheromone update schedule
 - 3.5 Initialization of pheromones
 - 3.6 Pheromone reinitialization
 - 3.7 Local pheromone update
 - 3.8 Pheromone limits
 - 3.9 Local search
 - 3.10 ACO algorithms as instantiations of the ACO Meta-heuristic
- 4 ACOTSP/ACOQAP: A unified framework of ACO algorithms for the TSP and QAP
 - 4.1 Finding a better ACO configuration for the TSP
 - 4.2 Finding a better ACO configuration for the QAP
- 5 Applications of ACO to other problem types
 - 5.1 Continuous Optimization Problems
 - 5.2 Multi-objective problems
 - 5.3 Dynamic problems
 - 5.4 Stochastic problems
- 6 ACO in combination with other methods
